INFORMATION

INFORMATION ABOUT THE TUTORIAL

The following quick reference serves as an aid in the commissioning of InstaFlow. In this guide, the use of the InstaFlow is explained step by step.

PREPARATIONS

You must make the following preparations in advance to use InstaFlow:

- You have a serial.
- You have an Instagram account.
- You have a Windows computer with admin rights (No VmWare or Virtualbox).
- You have Net Framework 3.5 or higher installed
- You have InstaFlow Donate/Gold (Donate/Gold is the same) Version.

APPROACH

STEP 1

1. Open InstaFlow.exe as Administrator. The following window will appear:

The image shows the main window of the InstaFlow application. It has a light gray background. At the top, there's a section titled "Serial" with a text box containing the instruction "Insert your serial in the box bellow and press Check Serial." Below this is a label "Your Serial:" followed by a text input field and a "Check Serial" button. Underneath is an "Introduction:" section with a list of four steps: 1. Click on "Get Token", 2. Authorize the Application, 3. You will redirect to a Page, where you will see your Token, 4. Paste the Token in the Box below. Below the introduction are three rows, each with a label "Access_Token:", a text input field, and a "Get Token" button (labeled "Get Token 1", "Get Token 2", and "Get Token 3" respectively). At the bottom right is a "Save" button.

2. Insert your Serial and click "Check Serial".
3. You will receive a message that the serial is activated on this Computer.

Note: You can activate the serial only on one PC! If you want to change contact instaflowvb@gmail.com

InstaFlow Donate/Gold Version

<http://www.instaflow.in/>

STEP 2

After you activated your account you must get three tokens from the same account.

Introduction:

1. Click on "Get Token"
2. Authorize the Application
3. You will redirect to a Page, where you will see your Token
4. Paste the Token in the Box below

Access_Token1:

Get Token 1

Access_Token2:

Get Token 2

Access_Token3:

Get Token 3

Save

1. Click "Get Token 1". A browser window will open and allow the access to the API.
After you will redirect to a page which will give you Token Nr 1. Insert this into Access_Token1.
Repeat for each token!
2. Now click on "Save" to save your settings.

STEP 3

1. Now you are in the main window.

A screenshot of the InstaFlow main window. At the top, it shows "Likes in this instance: 0" and "Likes over all time: 14". Below this are two checkboxes: "Turn Picture Show On/Off" and "SuperLike". In the center, there is a URL "http://www.instaflow.in" and a contact email "instaflowvb@gmail.com". To the right of the URL are two buttons: "1. Get Tags" and "2. Start". Below these are three text input fields labeled "Taglist for Token1", "Taglist for Token2", and "Taglist for Token3". At the bottom is a large empty text area.

2. You have to enter three taglists. For each token one.
We recommend enter personal taglists and don't use the "Get Tags Button"! But if you don't know how to get tags use the button.
3. Now the form must look like that:

A screenshot showing three text input fields filled with taglists. The first field contains: love, instagood, me, photooftheday, cute, instamood, tbt. The second field contains: nofilter, fashion, fun, sun, smile, followme, instagramers. The third field contains: throwbackthursday, bored, art, instahub, statigram, pink, photo.

4. At least you can choose if you want to turn superlike on or not.
"The Superlike feature is the best thing you have ever seen in a bot. It takes a random user by tag and likes 3 pictures of this person."
5. Now you can start the bot.

STEP 4

The screenshot shows the InstaFlow web interface. On the left is a large image of a cable car. To its right, there are statistics: "Likes in this instance: 63" and "Likes over all time: 77". Below these are two checkboxes: "Turn Picture Show On/Off" (checked) and "SuperLike" (checked). A link to <http://www.instaflow.in> and a contact email "instaflowyb@gmail.com" are displayed. Two buttons are present: "1. Get Tags" and "2. Stop" (highlighted with a blue border). Below these are three scrollable lists of tags: "love", "instagood", "me", "photooftheday", "cute", "instamood", "tbt"; "nofilter", "fashion", "fun", "sun", "smile", "followme", "instagramers"; and "throwbackthursday", "bored", "art", "instahub", "statigram", "pink", "photo". At the bottom is a scrollable list of image URLs and their types, such as "Image: 287662224457805200_226996738 (tbt)".

That's all. Your bot is now working and you don't have to do anything!

The InstaFlow Team wishes you much fun with the usage!

MULTIPLE ACCESS

1. Make all the preparations for the first account. Leave the program open.
2. Go to Instagram.com.
3. Your Account -> Logout.
4. Start a second instance of InstaFlow.
5. Make the preparations again with the other account.
6. When you finished you can click start on all of the instances.

Note: You can use as many instances as you want.

FAQ

INSTAFLOW BOT ISN'T WORKING AND STOPPED LIKING PICTURES. WHY?

There are two options:

1. Try it tomorrow. Maybe you have reached the limit. You can check it [here](#).
2. Go to your instagram account on Instagram.com then go to manage application, revoke the accesses of instaflow, and delete all files of instaflow! Try to get new tokens again. ;)

HOW CAN I SWITCH THE ACCOUNT?

1. Go to Instagram.com.
2. Your Account -> Logout.
3. Start Instaflow.
4. Get new tokens.
5. You can now switch your Account.

MY BOT DOESN'T START OR IS ASKING FOR .NET FRAMEWORK. WHAT IS THAT?

You can download the latest .NET Framework by visiting the link below:
