Best Instagram Bot

User manual

How to Run multiple instances

 Running multiple instances is very useful and effective. You can multiply the speed of following or unfollowing by running multiple instances of the bot.

To do this, open the Best Instagram Bot few times. Then run a following or unfollowing tasks in each instance. You can run 3 ,4 or even 7 instances if your computers performance is good. Running multiple instance for an hour is useful than running one instance for hours.

Like Back

With this task you can like one photo of people who have liked your photos.

- This task is done on statigram.
- **To Start**: Go to picture page you want to like back and press the button.
- Bot will first collect users and then like their photos. To skip collecting users click **File> skip collecting users**

Tips:

- Getting followers and likes using the bot depends on how much time you run the bot and how attractive your profile is.
- Don't expect thousand followers only running the bot for few minutes. ☺
- Don't try to get one million followers in a day ☺ running lot of instances whole day. Instagram may detect that you are using a bot.
- In case task getting slow or not working correctly after running the bot for long time; close the bot and try back in few hours.
- Normal speed is recommended for all tasks. For the best performance.
- Use multiple instances.
- Disable Image and animations via **Browser menu** for better performance and less bandwidth usage. (Note: This may affect Internet explorer too. Enable back later if you are using IE.)

Thanks for using Best Instagram Bot. Enjoy this Instagram Hack and make the most of it.
